Section V.2

Activity V.17 (~5 min) Sketch a representation of all the vectors belonging to span $\left\{ \begin{bmatrix} 6 \\ -4 \end{bmatrix}, \begin{bmatrix} -3 \\ 2 \end{bmatrix} \right\}$ in the xy plane.

Remark V.18 Recall these definitions from last class:

• A linear combination of vectors is given by adding scalar multiples of those vectors, such as:

$$\begin{bmatrix} 3 \\ 0 \\ 5 \end{bmatrix} = 2 \begin{bmatrix} 1 \\ -1 \\ 2 \end{bmatrix} + 1 \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$$

• The span of a set of vectors is the collection of all linear combinations of that set, such as:

$$\operatorname{span}\left\{ \begin{bmatrix} 1\\-1\\2\\1 \end{bmatrix}, \begin{bmatrix} 1\\2\\1 \end{bmatrix} \right\} = \left\{ a \begin{bmatrix} 1\\-1\\2\\1 \end{bmatrix} + b \begin{bmatrix} 1\\2\\1 \end{bmatrix} \middle| a, b \in \mathbb{R} \right\}$$

Activity V.19 (~15 min) The vector $\begin{bmatrix} -1 \\ -6 \\ 1 \end{bmatrix}$ belongs to span $\left\{ \begin{bmatrix} 1 \\ 0 \\ -3 \end{bmatrix}, \begin{bmatrix} -1 \\ -3 \\ 2 \end{bmatrix} \right\}$ exactly when there exists a solution to the vector equation $x_1 \begin{bmatrix} 1 \\ 0 \\ -3 \end{bmatrix} + x_2 \begin{bmatrix} -1 \\ -3 \\ 2 \end{bmatrix} = \begin{bmatrix} -1 \\ -6 \\ 1 \end{bmatrix}$.

Part 1: Reinterpret this vector equation as a system of linear equations.

Part 2: Find its solution set, using technology to find RREF of its corresponding augmented matrix.

Part 3: Given this solution set, does
$$\begin{bmatrix} -1 \\ -6 \\ 1 \end{bmatrix}$$
 belong to span $\left\{ \begin{bmatrix} 1 \\ 0 \\ -3 \end{bmatrix}, \begin{bmatrix} -1 \\ -3 \\ 2 \end{bmatrix} \right\}$?

Fact V.20 A vector $\vec{\mathbf{b}}$ belongs to span $\{\vec{\mathbf{v}}_1, \dots, \vec{\mathbf{v}}_n\}$ if and only if the linear system corresponding to $[\vec{\mathbf{v}}_1 \dots \vec{\mathbf{v}}_n | \vec{\mathbf{b}}]$ is consistent.

Put another way, $\vec{\mathbf{b}}$ belongs to span $\{\vec{\mathbf{v}}_1, \dots, \vec{\mathbf{v}}_n\}$ exactly when RREF $[\vec{\mathbf{v}}_1 \dots \vec{\mathbf{v}}_n | \vec{\mathbf{b}}]$ doesn't have a row $[0 \dots 0 | 1]$ representing the contradiction 0 = 1.

Activity V.21 (~10 min) Determine if $\begin{bmatrix} 3 \\ -2 \\ 1 \\ 5 \end{bmatrix}$ belongs to span $\left\{ \begin{bmatrix} 1 \\ 0 \\ -3 \\ 2 \end{bmatrix}, \begin{bmatrix} -1 \\ -3 \\ 2 \\ 2 \end{bmatrix} \right\}$ by row-reducing an appropriate matrix.

Activity V.22 (~5 min) Determine if $\begin{bmatrix} -1 \\ -9 \\ 0 \end{bmatrix}$ belongs to span $\left\{ \begin{bmatrix} 1 \\ 0 \\ -3 \end{bmatrix}, \begin{bmatrix} -1 \\ -3 \\ 2 \end{bmatrix} \right\}$ by row-reducing an appropriate matrix.

Activity V.23 (~10 min) Does the third-degree polynomial $3y^3 - 2y^2 + y + 5$ in \mathcal{P}^3 belong to span $\{y^3 - 3y + 2, -y^3 - 3y^2 + 2y + 2\}$?

Part 1: Reinterpret this question as an equivalent exercise involving Euclidean vectors in \mathbb{R}^4 . (Hint: What four numbers must you know to write a \mathcal{P}^3 polynomial?)

Part 2: Solve this equivalent exercise, and use its solution to answer the original question.

Activity V.24 ($\sim 5 \text{ min}$) Does the polynomial $x^2 + x + 1$ belong to span $\{x^2 - x, x + 1, x^2 - 1\}$?
