## MASTERY QUIZ DAY 12

Math 237 – Linear Algebra Fall 2017

Version 6

Show all work. Answers without work will not receive credit. You may use a calculator, but you must show all relevant work to receive credit for a standard.

**V1.** Let V be the set of all real numbers together with the operations  $\oplus$  and  $\odot$  defined by, for any  $x, y \in V$  and  $c \in \mathbb{R}$ ,

$$x \oplus y = x + y - 3$$
$$c \odot x = cx - 3(c - 1)$$

Determine if V is a vector space or not.

**Solution:** Let  $x, y \in V$ ,  $c, d \in \mathbb{R}$ .

- 1) Real addition is associative, so  $\oplus$  is associative.
- 2)  $x \oplus 3 = x + 3 3 = x$ , so 3 is the additive identity.
- 3)  $x \oplus (6-x) = x + (6-x) 3 = 3$ , so 6-x is the additive inverse of x.
- 4) Real addition is commutative, so  $\oplus$  is commutative.

5)

$$c \odot (d \odot x) = c \odot (dx - 3(d - 1))$$

$$= c (dx - 3(d - 1)) - 3(c - 1)$$

$$= cdx - 3(cd - 1)$$

$$= (cd) \odot x$$

6)  $1 \odot x = x - 3(1 - 1) = x$ 

7)

$$\begin{split} c\odot(x\oplus y) &= c\odot(x+y-3) \\ &= c(x+y-3) - 3(c-1) \\ &= cx - 3(c-1) + cy - 3(c-1) - 3 \\ &= (c\odot x) \oplus (c\odot y) \end{split}$$

8)

$$(c+d) \odot x = (c+d)x - 3(c+d-1)$$
  
=  $cx - 3(c-1) + dx - 3(c-1) - 3$   
=  $(c \odot x) \oplus (d \odot x)$ 

Therefore V is a vector space.

**V3.** Determine if ... spans  $\mathbb{R}^3$ 

**V4.** Determine if ... is a subspace of

V1: V3: V4:
