Section S.3

Observation S.3.1 In the previous section, we learned that computing a basis for the subspace span $\{\vec{\mathbf{v}}_1,\ldots,\vec{\mathbf{v}}_m\}$, is as simple as removing the vectors corresponding to the non-pivot columns of RREF $[\vec{\mathbf{v}}_1\ldots\vec{\mathbf{v}}_m]$.

For example, since

RREF
$$\begin{bmatrix} 1 & 2 & 3 \\ 0 & -2 & -2 \\ -3 & 1 & -2 \end{bmatrix} = \begin{bmatrix} 1 & 0 & 1 \\ 0 & 1 & 1 \\ 0 & 0 & 0 \end{bmatrix}$$

the subspace
$$W = \operatorname{span} \left\{ \begin{bmatrix} 1\\0\\-3 \end{bmatrix}, \begin{bmatrix} 2\\-2\\1 \end{bmatrix}, \begin{bmatrix} 3\\-2\\-2 \end{bmatrix} \right\}$$
 has $\left\{ \begin{bmatrix} 1\\0\\-3 \end{bmatrix}, \begin{bmatrix} 2\\-2\\1 \end{bmatrix} \right\}$ as a basis.

Activity S.3.2 (\sim 10 min) Let

$$S = \left\{ \begin{bmatrix} 2\\3\\0\\1\\1 \end{bmatrix}, \begin{bmatrix} 2\\0\\1\\-1 \end{bmatrix}, \begin{bmatrix} 2\\-3\\2\\-3 \end{bmatrix}, \begin{bmatrix} 1\\5\\-1\\0 \end{bmatrix} \right\} \quad \text{and} \quad T = \left\{ \begin{bmatrix} 2\\0\\1\\-1 \end{bmatrix}, \begin{bmatrix} 2\\-3\\2\\-3 \end{bmatrix}, \begin{bmatrix} 1\\5\\-1\\0 \end{bmatrix}, \begin{bmatrix} 2\\3\\0\\1 \end{bmatrix} \right\}$$

Part 1: Find a basis for span S.

Part 2: Find a basis for span T.

Observation S.3.3 Even though we found different bases for them, span S and span T are exactly the same subspace of \mathbb{R}^4 , since

$$S = \left\{ \begin{bmatrix} 2\\3\\0\\1\\1 \end{bmatrix}, \begin{bmatrix} 2\\0\\1\\-1 \end{bmatrix}, \begin{bmatrix} 2\\-3\\2\\-3 \end{bmatrix}, \begin{bmatrix} 1\\5\\-1\\0 \end{bmatrix} \right\} = \left\{ \begin{bmatrix} 2\\0\\1\\-1 \end{bmatrix}, \begin{bmatrix} 2\\-3\\2\\-3 \end{bmatrix}, \begin{bmatrix} 1\\5\\-1\\0 \end{bmatrix}, \begin{bmatrix} 2\\3\\0\\1 \end{bmatrix} \right\} = T$$

Fact S.3.4 Any non-trivial vector space has infinitely-many different bases, but all the bases for a given vector space are exactly the same size.

For example,

$$\{\vec{\mathbf{e}}_1, \vec{\mathbf{e}}_2, \vec{\mathbf{e}}_3\}$$
 and $\left\{ \begin{bmatrix} 1\\0\\0 \end{bmatrix}, \begin{bmatrix} 0\\1\\0 \end{bmatrix}, \begin{bmatrix} 1\\1\\1 \end{bmatrix} \right\}$ and $\left\{ \begin{bmatrix} 1\\0\\-3 \end{bmatrix}, \begin{bmatrix} 2\\-2\\1 \end{bmatrix}, \begin{bmatrix} 3\\-2\\5 \end{bmatrix} \right\}$

are all valid bases for \mathbb{R}^3 , and they all contain three vectors.

Definition S.3.5 The **dimension** of a vector space is equal to the size of any basis for the vector space.

As you'd expect, \mathbb{R}^n has dimension n. For example, \mathbb{R}^3 has dimension 3 because any basis for \mathbb{R}^3 such as

$$\{\vec{\mathbf{e}}_1, \vec{\mathbf{e}}_2, \vec{\mathbf{e}}_3\}$$
 and $\left\{\begin{bmatrix}1\\0\\0\end{bmatrix}, \begin{bmatrix}0\\1\\0\end{bmatrix}, \begin{bmatrix}1\\1\\1\end{bmatrix}\right\}$ and $\left\{\begin{bmatrix}1\\0\\-3\end{bmatrix}, \begin{bmatrix}2\\-2\\1\end{bmatrix}, \begin{bmatrix}3\\-2\\5\end{bmatrix}\right\}$

contains exactly three vectors.

Activity S.3.6 (~ 10 min) Find the dimension of each subspace of \mathbb{R}^4 by finding RREF for each corresponding matrix.

$$\operatorname{span} \left\{ \begin{bmatrix} 2\\3\\0\\-1 \end{bmatrix}, \begin{bmatrix} 2\\0\\0\\3 \end{bmatrix}, \begin{bmatrix} 4\\3\\0\\2 \end{bmatrix}, \begin{bmatrix} -3\\0\\1\\3 \end{bmatrix} \right\} \quad \operatorname{span} \left\{ \begin{bmatrix} 2\\3\\0\\-1 \end{bmatrix}, \begin{bmatrix} 2\\0\\0\\3 \end{bmatrix}, \begin{bmatrix} 3\\13\\7\\16 \end{bmatrix}, \begin{bmatrix} -1\\10\\7\\14 \end{bmatrix}, \begin{bmatrix} 4\\3\\0\\2 \end{bmatrix} \right\} \\
\operatorname{span} \left\{ \begin{bmatrix} 2\\3\\0\\-1 \end{bmatrix}, \begin{bmatrix} 3\\0\\0\\3 \end{bmatrix}, \begin{bmatrix} 3\\13\\7\\16 \end{bmatrix}, \begin{bmatrix} -1\\10\\7\\14 \end{bmatrix}, \begin{bmatrix} 4\\3\\0\\2 \end{bmatrix} \right\} \\
\operatorname{span} \left\{ \begin{bmatrix} 2\\3\\0\\-1 \end{bmatrix}, \begin{bmatrix} 3\\0\\0\\3 \end{bmatrix}, \begin{bmatrix} 3\\13\\7\\16 \end{bmatrix}, \begin{bmatrix} -1\\10\\7\\14 \end{bmatrix}, \begin{bmatrix} 4\\3\\0\\2 \end{bmatrix} \right\}$$

Fact S.3.7 Every vector space with finite dimension, that is, every vector space V with a basis of the form $\{\vec{\mathbf{v}}_1, \vec{\mathbf{v}}_2, \dots, \vec{\mathbf{v}}_n\}$ is said to be **isomorphic** to a Euclidean space \mathbb{R}^n , since there exists a natural correspondance between vectors in V and vectors in \mathbb{R}^n :

$$c_1\vec{\mathbf{v}}_1 + c_2\vec{\mathbf{v}}_2 + \dots + c_n\vec{\mathbf{v}}_n \leftrightarrow \begin{bmatrix} c_1 \\ c_2 \\ \vdots \\ c_n \end{bmatrix}$$

Observation S.3.8 We've already been taking advantage of the previous fact by converting polynomials and matrices into Euclidean vectors. Since \mathcal{P}^3 and $M_{2,2}$ are both four-dimensional:

$$4x^3 + 0x^2 - 1x + 5 \leftrightarrow \begin{bmatrix} 4 \\ 0 \\ -1 \\ 5 \end{bmatrix} \leftrightarrow \begin{bmatrix} 4 & 0 \\ -1 & 5 \end{bmatrix}$$

Observation S.3.9 The space of polynomials \mathcal{P} (of any degree) has the basis $\{1, x, x^2, x^3, \dots\}$, so it is a natural example of an infinite-dimensional vector space.

Since \mathcal{P} and other infinite-dimensional spaces cannot be treated as an isomorphic finite-dimensional Euclidean space \mathbb{R}^n , vectors in such spaces cannot be studied by converting them into Euclidean vectors. Fortunately, most of the examples we will be interested in for this course will be finite-dimensional.

Definition S.3.10 A **homogeneous** system of linear equations is one of the form:

$$a_{11}x_1 + a_{12}x_2 + \ldots + a_{1n}x_n = 0$$

$$a_{21}x_1 + a_{22}x_2 + \ldots + a_{2n}x_n = 0$$

$$\vdots \qquad \vdots \qquad \vdots$$

$$a_{m1}x_1 + a_{m2}x_2 + \ldots + a_{mn}x_n = 0$$

This system is equivalent to the vector equation:

$$x_1\vec{\mathbf{v}}_1 + \dots + x_n\vec{\mathbf{v}}_n = \vec{\mathbf{0}}$$

and the augmented matrix:

$$\begin{bmatrix} a_{11} & a_{12} & \cdots & a_{1n} & 0 \\ a_{21} & a_{22} & \cdots & a_{2n} & 0 \\ \vdots & \vdots & \ddots & \vdots & \vdots \\ a_{m1} & a_{m2} & \cdots & a_{mn} & 0 \end{bmatrix}$$

Activity S.3.11 (~5 min) Note that if $\begin{bmatrix} a_1 \\ \vdots \\ a_n \end{bmatrix}$ and $\begin{bmatrix} b_1 \\ \vdots \\ b_n \end{bmatrix}$ are solutions to $x_1\vec{\mathbf{v}}_1 + \dots + x_n\vec{\mathbf{v}}_n = \vec{\mathbf{0}}$ so is

$$\begin{bmatrix} a_1 + b_1 \\ \vdots \\ a_n + b_n \end{bmatrix}, \text{ since }$$

$$a_1\vec{\mathbf{v}}_1 + \dots + a_n\vec{\mathbf{v}}_n = \vec{\mathbf{0}} \text{ and } b_1\vec{\mathbf{v}}_1 + \dots + b_n\vec{\mathbf{v}}_n = \vec{\mathbf{0}}$$

implies

$$(a_1+b_1)\vec{\mathbf{v}}_1+\cdots+(a_n+b_n)\vec{\mathbf{v}}_n=\vec{\mathbf{0}}.$$

Similarly, if $c \in \mathbb{R}$, $\begin{bmatrix} ca_1 \\ \vdots \\ ca_n \end{bmatrix}$ is a solution. Thus the solution set of a homogeneous system is...

- a) A basis for \mathbb{R}^n .
- b) A subspace of \mathbb{R}^n .
- c) The empty set.

Activity S.3.12 (~10 min) Consider the homogeneous system of equations

$$x_1 + 2x_2 + x_4 = 0$$

 $2x_1 + 4x_2 - x_3 - 2x_4 = 0$
 $3x_1 + 6x_2 - x_3 - x_4 = 0$

Part 1: Find its solution set (a subspace of \mathbb{R}^4).

Part 2: Rewrite this solution space in the form

$$\left\{ a \begin{bmatrix} ? \\ ? \\ ? \\ ? \end{bmatrix} + b \begin{bmatrix} ? \\ ? \\ ? \\ ? \end{bmatrix} \middle| a, b \in \mathbb{R} \right\}.$$

Fact S.3.13 The coefficients of the free variables in the solution set of a linear system always yield linearly independent vectors.

Thus if

$$\left\{ a \begin{bmatrix} 4\\1\\0\\0\\0 \end{bmatrix} + b \begin{bmatrix} -3\\0\\-2\\1 \end{bmatrix} \middle| a, b \in \mathbb{R} \right\}$$

is the solution space for a homoegeneous system, then

$$\left\{ \begin{bmatrix} 4\\1\\0\\0 \end{bmatrix}, \begin{bmatrix} -3\\0\\-2\\1 \end{bmatrix} \right\}$$

is a basis for the solution space.

Activity S.3.14 ($\sim 10 \text{ min}$) Consider the homogeneous system of equations

$$\begin{array}{rcl} x_1 - 3x_2 + 2x_3 & = 0 \\ 2x_1 - 6x_2 + 4x_3 + 3x_4 & = 0 \\ -2x_1 + 6x_2 - 4x_3 - 4x_4 & = 0 \end{array}$$

Find a basis for its solution space.

Activity S.3.15 (~ 5 min) Suppose W is a subspace of \mathcal{P}^8 , and you know that it contains a linearly independent set of 3 vectors. What can you conclude about W?

- (a) The dimension of W is at most 3.
- (b) The dimension of W is exactly 3.
- (c) The dimension of W is at least 3.

Activity S.3.16 ($\sim 5 \ min$) Suppose W is a subspace of \mathcal{P}^8 , and you know that it contains a spanning set of 3 vectors. What can you conclude about W?

- (a) The dimension of W is at most 3.
- (b) The dimension of W is exactly 3.
- (c) The dimension of W is at least 3.
