Section V.1

Remark V.6 Previously, we defined a **vector space** V to be any collection of mathematical objects with associated addition and scalar multiplication operations that satisfy the following eight properties for all $\vec{\mathbf{u}}, \vec{\mathbf{v}}, \vec{\mathbf{w}}$ in V, and all scalars (i.e. real numbers) a, b.

- Addition is associative: $\vec{\mathbf{u}} \oplus (\vec{\mathbf{v}} \oplus \vec{\mathbf{w}}) = (\vec{\mathbf{u}} \oplus \vec{\mathbf{v}}) \oplus \vec{\mathbf{w}}$.
- Addition is commutative: $\vec{u} \oplus \vec{v} = \vec{v} \oplus \vec{u}$.
- Additive identity exists: There exists some \vec{z} where $\vec{v} \oplus \vec{z} = \vec{v}$.
- Additive inverses exist: There exists some $-\vec{\mathbf{v}}$ where $\vec{\mathbf{v}} \oplus (-\vec{\mathbf{v}}) = \vec{\mathbf{z}}$.
- Scalar multiplication is associative: $a \odot (b \odot \vec{\mathbf{v}}) = (ab) \odot \vec{\mathbf{v}}$.
- Scalar multiplication identity exists: $1 \odot \vec{v} = \vec{v}$.
- Scalar mult. distributes over vector addition: $a \odot (\vec{\mathbf{u}} \oplus \vec{\mathbf{v}}) = a \odot \vec{\mathbf{u}} \oplus a \odot \vec{\mathbf{v}}$.
- Scalar mult. distributes over scalar addition: $(a+b) \odot \vec{\mathbf{v}} = a \odot \vec{\mathbf{v}} \oplus b \odot \vec{\mathbf{v}}$.

Remark V.7 Every Euclidean space \mathbb{R}^n is a vector space, but there are other examples of vector spaces as well.

For example, consider the set \mathbb{C} of complex numbers with the usual defintions of addition and scalar multiplication, and let $\vec{\mathbf{u}} = a + b\mathbf{i}$, $\vec{\mathbf{v}} = c + d\mathbf{i}$, and $\vec{\mathbf{w}} = e + f\mathbf{i}$. Then

$$\vec{\mathbf{u}} + (\vec{\mathbf{v}} + \vec{\mathbf{w}}) = (a + b\mathbf{i}) + ((c + d\mathbf{i}) + (e + f\mathbf{i}))$$

$$= (a + b\mathbf{i}) + ((c + e) + (d + f)\mathbf{i})$$

$$= (a + c + e) + (b + d + f)\mathbf{i}$$

$$= ((a + c) + (b + d)\mathbf{i}) + (e + f\mathbf{i})$$

$$= (\vec{\mathbf{u}} + \vec{\mathbf{v}}) + \vec{\mathbf{w}}$$

All eight properties can be verified in this way.

Remark V.8 The following sets are just a few examples of vector spaces, with the usual/natural operations for addition and scalar multiplication.

- \mathbb{R}^n : Euclidean vectors with n components.
- C: Complex numbers.
- $M_{m,n}$: Matrices of real numbers with m rows and n columns.
- \mathcal{P}^n : Polynomials of degree n or less.
- \mathcal{P} : Polynomials of any degree.
- $C(\mathbb{R})$: Real-valued continuous functions.

Activity V.9 (~20 min) Consider the set $V = \{(x,y) | y = e^x\}$ with operations defined by

$$(x_1, y_1) \oplus (x_2, y_2) = (x_1 + x_2, y_1 y_2)$$
 $c \odot (x_1, y_1) = (cx_1, y_1^c)$

Part 1: Show that V satisfies the distributive property

$$(a + b) \odot (x_1, y_1) = (a \odot (x_1, y_1)) \oplus (b \odot (x_1, y_1))$$

by simplifying both sides and verifying they are the same expression. $Part\ 2$: Show that V contains an additive identity element satisfying

$$(x_1,y_1)\oplus \vec{\mathbf{z}}=(x_1,y_1)$$

for all $(x_1, y_1) \in V$ by choosing appropriate values for $\vec{\mathbf{z}} = (?,?)$.

Remark V.10 It turns out $V = \{(x,y) | y = e^x\}$ with operations defined by

$$(x_1, y_1) \oplus (x_2, y_2) = (x_1 + x_2, y_1 y_2)$$
 $c \odot (x_1, y_1) = (cx_1, y_1^c)$

satisfies all eight properties.

- Addition is associative: $\vec{\mathbf{u}} \oplus (\vec{\mathbf{v}} \oplus \vec{\mathbf{w}}) = (\vec{\mathbf{u}} \oplus \vec{\mathbf{v}}) \oplus \vec{\mathbf{w}}$.
- Addition is commutative: $\vec{\mathbf{u}} \oplus \vec{\mathbf{v}} = \vec{\mathbf{v}} \oplus \vec{\mathbf{u}}$.
- Additive identity exists: There exists some \vec{z} where $\vec{v} \oplus \vec{z} = \vec{v}$.
- Additive inverses exist: There exists some $-\vec{\mathbf{v}}$ where $\vec{\mathbf{v}} \oplus (-\vec{\mathbf{v}}) = \vec{\mathbf{z}}$.
- Scalar multiplication is associative: $a \odot (b \odot \vec{\mathbf{v}}) = (ab) \odot \vec{\mathbf{v}}$.
- Scalar multiplication identity exists: $1 \odot \vec{v} = \vec{v}$.
- Scalar mult. distributes over vector addition: $a \odot (\vec{\mathbf{u}} \oplus \vec{\mathbf{v}}) = a \odot \vec{\mathbf{u}} \oplus a \odot \vec{\mathbf{v}}$.
- Scalar mult. distributes over scalar addition: $(a+b) \odot \vec{\mathbf{v}} = a \odot \vec{\mathbf{v}} \oplus b \odot \vec{\mathbf{v}}$.

Thus, V is a vector space.

Activity V.11 (~15 min) Let $V = \{(x,y) | x,y \in \mathbb{R}\}$ have operations defined by

$$(x_1, y_1) \oplus (x_2, y_2) = (x_1 + y_1 + x_2 + y_2, x_1^2 + x_2^2)$$
 $c \odot (x_1, y_1) = (x_1^c, y_1 + c - 1).$

Part 1: Show that 1 is the scalar multiplication identity element by simplifying $1 \odot (x, y)$ to (x, y).

Part 2: Show that V does not have an additive identity element by showing that $(0,-1) \oplus \vec{z} \neq (0,-1)$ no matter how $\vec{z} = (z,w)$ is chosen.

Part 3: Is V a vector space?

Activity V.12 (~ 15 min) Let $V = \{(x,y) | x,y \in \mathbb{R}\}$ have operations defined by

$$(x_1, y_1) \oplus (x_2, y_2) = (x_1 + x_2, y_1 + 3y_2)$$
 $c \odot (x_1, y_1) = (cx_1, cy_1).$

Part 1: Show that scalar multiplication distributes over vector addition, i.e.

$$c \odot ((x_1, y_1) \oplus (x_2, y_2)) = c \odot (x_1, y_1) \oplus c \odot (x_2, y_2)$$

for all $c \in \mathbb{R}$, (x_1, y_1) , $(x_2, y_2) \in V$.

Part 2: Show that vector addition is not associative, i.e.

$$(x_1, y_1) \oplus ((x_2, y_2) \oplus (x_3, y_3)) \neq ((x_1, y_1) \oplus (x_2, y_2)) \oplus (x_3, y_3)$$

for **some** vectors $(x_1, y_1), (x_2, y_2), (x_3, y_3) \in V$.

Part 3: Is V a vector space?

Definition V.13 A linear combination of a set of vectors $\{\vec{\mathbf{v}}_1, \vec{\mathbf{v}}_2, \dots, \vec{\mathbf{v}}_m\}$ is given by $c_1\vec{\mathbf{v}}_1 + c_2\vec{\mathbf{v}}_2 + \dots + c_m\vec{\mathbf{v}}_m\}$ $c_m \vec{\mathbf{v}}_m$ for any choice of scalar multiples c_1, c_2, \ldots, c_m .

For example, we can say $\begin{bmatrix} 3 \\ 0 \\ 5 \end{bmatrix}$ is a linear combination of the vectors $\begin{bmatrix} 1 \\ -1 \\ 2 \end{bmatrix}$ and $\begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$ since

$$\begin{bmatrix} 3 \\ 0 \\ 5 \end{bmatrix} = 2 \begin{bmatrix} 1 \\ -1 \\ 2 \end{bmatrix} + 1 \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$$

Definition V.14 The span of a set of vectors is the collection of all linear combinations of that set:

$$span{\vec{\mathbf{v}}_1, \vec{\mathbf{v}}_2, ..., \vec{\mathbf{v}}_m} = \{c_1\vec{\mathbf{v}}_1 + c_2\vec{\mathbf{v}}_2 + \cdots + c_m\vec{\mathbf{v}}_m \mid c_i \in \mathbb{R}\}.$$

For example:

$$\operatorname{span}\left\{ \begin{bmatrix} 1\\-1\\2\\1 \end{bmatrix}, \begin{bmatrix} 1\\2\\1 \end{bmatrix} \right\} = \left\{ a \begin{bmatrix} 1\\-1\\2\\1 \end{bmatrix} + b \begin{bmatrix} 1\\2\\1 \end{bmatrix} \middle| a, b \in \mathbb{R} \right\}$$

Activity V.15 ($\sim 10 \ min)$ Consider span $\left\{ \begin{bmatrix} 1 \\ 2 \end{bmatrix} \right\}$.

Part 1: Sketch
$$1\begin{bmatrix} 1\\2 \end{bmatrix} = \begin{bmatrix} 1\\2 \end{bmatrix}$$
,

$$3\begin{bmatrix}1\\2\end{bmatrix} = \begin{bmatrix}3\\6\end{bmatrix},$$

$$0 \begin{bmatrix} 1 \\ 2 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

$$3\begin{bmatrix}1\\2\end{bmatrix} = \begin{bmatrix}3\\6\end{bmatrix}, \qquad 0\begin{bmatrix}1\\2\end{bmatrix} = \begin{bmatrix}0\\0\end{bmatrix}, \qquad \text{and } -2\begin{bmatrix}1\\2\end{bmatrix} = \begin{bmatrix}-2\\-4\end{bmatrix}$$

in the xy plane.

Part 2: Sketch a representation of all the vectors belonging to span $\left\{ \begin{bmatrix} 1 \\ 2 \end{bmatrix} \right\} = \left\{ a \begin{bmatrix} 1 \\ 2 \end{bmatrix} \middle| a \in \mathbb{R} \right\}$ in the xyplane.

 $\begin{array}{c} \textbf{Activity V.16} \ (\sim\!10 \ min) \ \text{Consider span} \left\{ \begin{bmatrix} 1 \\ 2 \end{bmatrix}, \begin{bmatrix} -1 \\ 1 \end{bmatrix} \right\}. \\ Part \ 1: \ \text{Sketch the following linear combinations in the } xy \ \text{plane}. \end{array}$

$$1 \begin{bmatrix} 1 \\ 2 \end{bmatrix} + 0 \begin{bmatrix} -1 \\ 1 \end{bmatrix} \qquad 0 \begin{bmatrix} 1 \\ 2 \end{bmatrix} + 1 \begin{bmatrix} -1 \\ 1 \end{bmatrix} \qquad 1 \begin{bmatrix} 1 \\ 2 \end{bmatrix} + 1 \begin{bmatrix} -1 \\ 1 \end{bmatrix}$$
$$-2 \begin{bmatrix} 1 \\ 2 \end{bmatrix} + 1 \begin{bmatrix} -1 \\ 1 \end{bmatrix} \qquad -1 \begin{bmatrix} 1 \\ 2 \end{bmatrix} + -2 \begin{bmatrix} -1 \\ 1 \end{bmatrix}$$

Part 2: Sketch a representation of all the vectors belonging to span $\left\{ \begin{bmatrix} 1\\2 \end{bmatrix}, \begin{bmatrix} -1\\1 \end{bmatrix} \right\}$ in the xy plane.
