Module M: Understanding Matrices Algebraically

Section M.1 Section M.2 Section M.3

What algebraic structure do matrices have?

Section M.1 Section M.2 Section M.3

At the end of this module, students will be able to...

- M1. Matrix Multiplication. ... multiply matrices.
- **M2. Invertible Matrices.** ... determine if a square matrix is invertible or not.
- M3. Matrix inverses. ... compute the inverse matrix of an invertible matrix.

#### **Readiness Assurance Outcomes**

Before beginning this module, each student should be able to...

- Compose functions of real numbers.
- Identify the domain and codomain of linear transformations.
- Find the matrix corresponding to a linear transformation and compute the image of a vector given a standard matrix A2
- Determine if a linear transformation is injective and/or surjective A3
- Interpret the ideas of injectivity and surjectivity in multiple ways.

#### **Definition M.1.5**

We define the **product** AB of a  $m \times n$  matrix A and a  $n \times k$  matrix B to be the  $m \times k$  standard matrix of the composition map of the two corresponding linear functions.

For the previous activity, S had a  $4 \times 2$  matrix and T had a  $2 \times 3$  matrix, so  $S \circ T$  had a  $4 \times 3$  standard matrix:

$$AB = \begin{bmatrix} 1 & 2 \\ 0 & 1 \\ 3 & 5 \\ -1 & -2 \end{bmatrix} \begin{bmatrix} 2 & 1 & -3 \\ 5 & -3 & 4 \end{bmatrix}$$

$$= [(S \circ T)(\mathbf{e}_1)(S \circ T)(\mathbf{e}_2)(S \circ T)(\mathbf{e}_3)] = \begin{bmatrix} 12 & -5 & 5 \\ 5 & -3 & 4 \\ 31 & -12 & 11 \\ -12 & 5 & -5 \end{bmatrix}$$

by the matrix 
$$A = \begin{bmatrix} -4 & -2 & 3 \\ 0 & 1 & 1 \end{bmatrix}$$
.

Find the standard matrix AB of  $S \circ T$ .

#### Section M.1 Section M.2 Section M.3

## Activity M.1.7 ( $\sim$ 5 min)

Let 
$$T: \mathbb{R}^2 \to \mathbb{R}^3$$
 be given by the matrix  $B = \begin{bmatrix} 2 & 3 \\ 1 & -1 \\ 0 & -1 \end{bmatrix}$  and  $S: \mathbb{R}^3 \to \mathbb{R}^2$  be given

by the matrix 
$$A = \begin{bmatrix} -4 & -2 & 3 \\ 0 & 1 & 1 \end{bmatrix}$$
.

Find the standard matrix BA of  $T \circ S$ .

#### Activity M.1.8 ( $\sim$ 5 min)

Matrix multiplication only makes sense if the first matrix has as many columns as the second matrix has rows. Label each of these matrices with  $\mathbf{rows} \times \mathbf{columns}$ , and then figure out which of the products AB, AC, BA, BC, CA, CB can actually be computed.

$$A = \begin{bmatrix} 1 & 0 & -3 \\ 3 & 2 & 1 \end{bmatrix} \qquad B = \begin{bmatrix} 2 & 2 & 1 & 0 & 1 \\ 1 & 1 & 1 & -1 & 0 \\ 0 & 0 & 3 & 2 & 1 \\ -1 & 5 & 7 & 2 & 1 \end{bmatrix} \qquad C = \begin{bmatrix} 2 & 2 \\ 0 & -1 \\ 3 & 1 \\ 4 & 0 \end{bmatrix}$$

Section M.1 Section M.2

$$A = \begin{bmatrix} 3 & 1 & -1 \\ 2 & 0 & 4 \\ -1 & 3 & 5 \end{bmatrix} \qquad X = \mathbf{x} = \begin{bmatrix} x \\ y \\ z \end{bmatrix} \qquad B = \mathbf{b} = \begin{bmatrix} 5 \\ -7 \\ 2 \end{bmatrix}$$

$$X = \mathbf{x} = \begin{bmatrix} x \\ y \\ z \end{bmatrix}$$

$$B = \mathbf{b} = \begin{bmatrix} 5 \\ -7 \\ 2 \end{bmatrix}$$

So we may study the linear system

$$3x + y - z = 5$$
$$2x + 4z = -7$$
$$-x + 3y + 5z = 2$$

as both a vector equation  $A\mathbf{x} = \mathbf{b}$  and a matrix equation AX = B:

$$\begin{bmatrix} 3 & 1 & -1 \\ 2 & 0 & 4 \\ -1 & 3 & 5 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix} = \begin{bmatrix} 5 \\ -7 \\ 2 \end{bmatrix}$$

## Activity M.2.1 ( $\sim$ 5 min)

Let 
$$A = \begin{bmatrix} 2 & 7 & -1 \\ 0 & 3 & 2 \\ 1 & 1 & -1 \end{bmatrix}$$
. Find a  $3 \times 3$  matrix  $I$  such that  $IA = A$ , that is,

$$\begin{bmatrix} ? & ? & ? \\ ? & ? & ? \\ ? & ? & ? \end{bmatrix} \begin{bmatrix} 2 & 7 & -1 \\ 0 & 3 & 2 \\ 1 & 1 & -1 \end{bmatrix} = \begin{bmatrix} 2 & 7 & -1 \\ 0 & 3 & 2 \\ 1 & 1 & -1 \end{bmatrix}$$

#### **Definition M.2.2**

The identity matrix  $I_n$  (or just I when n is obvious from context) is the  $n \times n$  matrix

$$I_n = egin{bmatrix} 1 & 0 & \dots & 0 \ 0 & 1 & \ddots & dots \ dots & \ddots & \ddots & 0 \ 0 & \dots & 0 & 1 \end{bmatrix}.$$

It has a 1 on each diagonal element and a 0 in every other position.

#### Fact M.2.3

For any square matrix A, IA = AI = A:

$$\begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} 2 & 7 & -1 \\ 0 & 3 & 2 \\ 1 & 1 & -1 \end{bmatrix} = \begin{bmatrix} 2 & 7 & -1 \\ 0 & 3 & 2 \\ 1 & 1 & -1 \end{bmatrix} \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} = \begin{bmatrix} 2 & 7 & -1 \\ 0 & 3 & 2 \\ 1 & 1 & -1 \end{bmatrix}$$

#### **Fact M.2.5**

If R is the result of applying a row operation to I, then RA is the result of applying the same row operation to A.

This means that for any matrix A, we can find a series of matrices  $R_1, \ldots, R_k$  corresponding to the row operations such that

$$R_1R_2\cdots R_kA=\mathsf{RREF}(A).$$

That is, row reduction can be thought of as the result of matrix multiplication.

#### **Definition M.3.1**

Let  $T: \mathbb{R}^n \to \mathbb{R}^n$  be a linear map with standard matrix A.

- If T is a bijection and B is any  $\mathbb{R}^n$  vector, then T(X) = AX = B has a unique solution X.
- So we may define an **inverse map**  $T^{-1}: \mathbb{R}^n \to \mathbb{R}^n$  by setting  $T^{-1}(B) = X$  to be this unique solution.
- Let  $A^{-1}$  be the standard matrix for  $T^{-1}$ . We call  $A^{-1}$  the **inverse matrix** of A, so we also say that A is **invertible**.

Let  $T: \mathbb{R}^2 \to \mathbb{R}^2$  be the bijective linear map defined by  $T\left(\begin{bmatrix} x \\ y \end{bmatrix}\right) = \begin{bmatrix} 2x - 3y \\ -3x + 5y \end{bmatrix}$ . It can be shown that T is bijective and has the inverse map

$$T^{-1}\left(\begin{bmatrix} x \\ y \end{bmatrix}\right) = \begin{bmatrix} 5x + 3y \\ 3x + 2y \end{bmatrix}.$$

Let  $T: \mathbb{R}^2 \to \mathbb{R}^2$  be the bijective linear map defined by  $T\left( \left| \begin{matrix} x \\ y \end{matrix} \right| \right) = \left| \begin{matrix} 2x - 3y \\ -3x + 5y \end{matrix} \right|$ . It can be shown that T is bijective and has the inverse map

$$T^{-1}\left(\begin{bmatrix} x \\ y \end{bmatrix}\right) = \begin{bmatrix} 5x + 3y \\ 3x + 2y \end{bmatrix}.$$
