Section V.0

Activity V.0.1 ($\sim 20 \text{ min}$) Consider each of the following vector properties. Label each property with \mathbb{R}^1 , \mathbb{R}^2 , and/or \mathbb{R}^3 if that property holds for Euclidean vectors/scalars $\mathbf{u}, \mathbf{v}, \mathbf{w}$ of that dimension.

1. Addition associativity.

$$\mathbf{u} + (\mathbf{v} + \mathbf{w}) = (\mathbf{u} + \mathbf{v}) + \mathbf{w}.$$

2. Addition commutivity.

$$\mathbf{u} + \mathbf{v} = \mathbf{v} + \mathbf{u}$$
.

3. Addition identity.

There exists some \mathbf{z} where $\mathbf{v} + \mathbf{z} = \mathbf{v}$.

4. Addition inverse.

There exists some $-\mathbf{v}$ where $\mathbf{v} + (-\mathbf{v}) = \mathbf{z}$.

5. Addition midpoint uniqueness.

There exists a unique \mathbf{m} where the distance from \mathbf{u} to \mathbf{m} equals the distance from \mathbf{m} to \mathbf{v}

6. Scalar multiplication associativity.

$$a(b\mathbf{v}) = (ab)\mathbf{v}.$$

7. Scalar multiplication identity.

$$1\mathbf{v} = \mathbf{v}$$
.

8. Scalar multiplication relativity.

There exists some scalar c where either $c\mathbf{v} = \mathbf{w}$ or $c\mathbf{w} = \mathbf{v}$.

9. Scalar distribution.

$$a(\mathbf{u} + \mathbf{v}) = a\mathbf{u} + a\mathbf{v}.$$

10. Vector distribution.

$$(a+b)\mathbf{v} = a\mathbf{v} + b\mathbf{v}.$$

11. Orthogonality.

There exists a non-zero vector \mathbf{n} such that \mathbf{n} is orthogonal to both \mathbf{u} and \mathbf{v} .

12. Bidimensionality.

$$\mathbf{v} = a\mathbf{i} + b\mathbf{j}$$
 for some value of a, b .

Definition V.0.2 A **vector space** V is any collection of mathematical objects with associated addition and scalar multiplication operations that satisfy the following properties. Let $\mathbf{u}, \mathbf{v}, \mathbf{w}$ belong to V, and let a, b be scalar numbers.

• Addition associativity.

$$\mathbf{u} + (\mathbf{v} + \mathbf{w}) = (\mathbf{u} + \mathbf{v}) + \mathbf{w}.$$

• Addition commutivity.

$$\mathbf{u} + \mathbf{v} = \mathbf{v} + \mathbf{u}$$
.

• Addition identity.

There exists some \mathbf{z} where $\mathbf{v} + \mathbf{z} = \mathbf{v}$.

• Addition inverse.

There exists some
$$-\mathbf{v}$$
 where $\mathbf{v} + (-\mathbf{v}) = \mathbf{z}$.

• Scalar multiplication associativity.

$$a(b\mathbf{v}) = (ab)\mathbf{v}.$$

• Scalar multiplication identity.

$$1\mathbf{v} = \mathbf{v}$$
.

• Scalar distribution.

$$a(\mathbf{u} + \mathbf{v}) = a\mathbf{u} + a\mathbf{v}.$$

• Vector distribution.

$$(a+b)\mathbf{v} = a\mathbf{v} + b\mathbf{v}.$$

Any Euclidean vector space \mathbb{R}^n satisfies all eight requirements regardless of the value of n, but we will also study other types of vector spaces.
